

## **ABSTRACT OF THE DISCLOSURE**

A foldable basketball game assembly includes a base, an extendable upright frame connected to an end of the base and an extendable end frame connected to the other end of the base. A board is connected to the upper section of the upright frame and a sound producing member is connected to the board. A hoop is pivotably connected to the sound producing member and a sensor extended from the sound producing member is located in a center of the loop so that when a ball enters the hoop, a pre-set sound is produced.
